

Transform activation and orchestration for service providers with Intraway's Network as a Service (NaaS) solution

Challenges

Overcoming the limitations of legacy systems

Trying to support new services and improve efficiency, operators are grappling with the limitations of legacy systems that they have invested heavily in – including outdated billing, charging, and OSS systems that lack the agility and scalability needed to support modern services such as 5G and NaaS, SASE and others.

The challenge of modernization and integrating new systems with existing infrastructure further compounds this issue, often leading to operational inefficiencies and increased costs. The shift towards cloud adoption not only supports the growing volume of data but also enables faster response to market changes. Companies are also increasingly automating their billing and charging processes, aiming to reduce errors and improve efficiency. This shift is crucial in maintaining billing accuracy and minimizing revenue leakage.

The telecommunications industry is witnessing transformational trends, the most significant being the shift toward cloud adoption. This shift not only supports the growing volume of data but also enables faster response to market changes.

Migrating their billing

Changing their charging methods

Shifting their OSS systems to the cloud

Requiring enhanced scalability and flexibility

The Intraway and Totogi Solution

From Billing to Network: Service Orchestration and Online Charging

Symphonica's service automation and orchestration, along with Totogi as a Charging-as-a-Service platform, bring significant value to network operators. Together, they provide a robust, scalable, and flexible solution that can handle the complex charging and provisioning requirements of modern telecommunications services, including 5G and Network-as-a-Service (NaaS) offerings.

Symphonica

- ✓ Provides CSPs with cloud-native, codeless/no-code automation and orchestration capabilities.
- ✓ Simplifies the deployment and management of NaaS services.
- ✓ Reduces the operational complexity and costs for operators.
- ✓ Makes NaaS offerings more attractive to customers.
- ✓ Helps to drive uptake and revenue.

Totogi

- ✓ Handles large volumes of charging data, making it suitable for large-scale deployments.
- ✓ Supports flexible charging models.
- ✓ Enables operators to manage the charging processes accurately.
- ✓ Ensures accurate and timely charging.
- ✓ Helps operators to maximize their revenue and minimize disputes and errors.

Empowering Operators with a Seamless Integration

Business advantages of the Symphonica and Totogi partnership

- 

Efficient Service Orchestration and Activation
Symphonica's service orchestration and activation capabilities enable CSPs to efficiently manage and deploy services across multiple networks, reducing time-to-market and operational costs.
- 

Adherence to Industry Standards
Symphonica's alignment with TM Forum and MEF standards ensures compatibility with industry best practices and smooth integration with other systems and services.
- 

Improved Customer Experience
Totogi's Charging-as-a-Service platform provides robust, real-time charging and billing capabilities, allowing CSPs to implement flexible charging models tailored to their customers' needs, maximizing revenue and customer satisfaction.
- 

Accurate and Flexible Charging
Totogi's Charging-as-a-Service platform provides robust, real-time charging and billing capabilities, allowing CSPs to implement flexible charging models tailored to their customers' needs, maximizing revenue and customer satisfaction.
- 

Operational Efficiency
By automating many of the tasks involved in service deployment and management, Symphonica and Totogi can help operators achieve greater operational efficiency, freeing up resources for other tasks.
- 

Seamless Integration with Existing Systems
Symphonica's service orchestration and activation capabilities enable CSPs to efficiently manage and deploy services across multiple networks, reducing time-to-market and operational costs.
- 

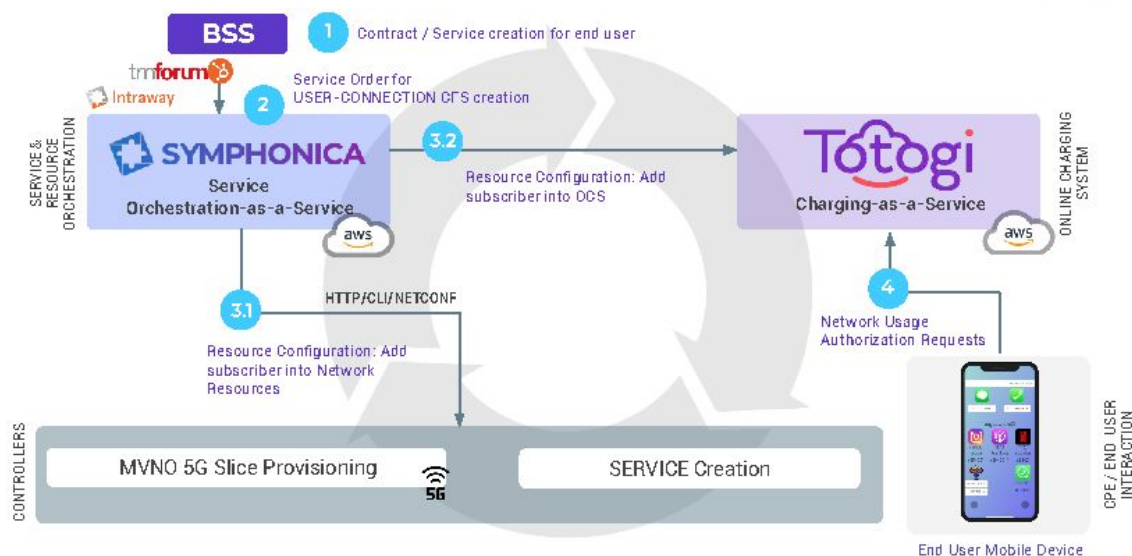

Scalability
As cloud-native solutions, Symphonica and Totogi can scale to handle large volumes of data and transactions, crucial in an environment with high volumes of services and customers.
- 

Future-Proof Solution
With their support for the latest technologies and standards, including 5G and NaaS, Symphonica and Totogi provide a future-proof solution that can help CSPs stay ahead of the curve in the rapidly evolving telecommunications landscape.
- 

Automation
Symphonica's codeless automation capabilities simplify the deployment and management of services, reducing operational complexity and costs for operators.
- 

Cost Savings
By reducing the time and resources required for service deployment and management, and by providing accurate and flexible charging, Symphonica and Totogi can help CSPs achieve significant cost savings.

From Billing to Network : Service Orchestration and Online Charging

Billing-to-Network: Service Orchestration and Charging with Symphonica SaaS and Totogi CaaS illustrate a Cloud-Native Approach to Service Creation, Provisioning/Activation and Charging
Create, Select and Implement Plans to Maximize revenue opportunities across your infrastructure
